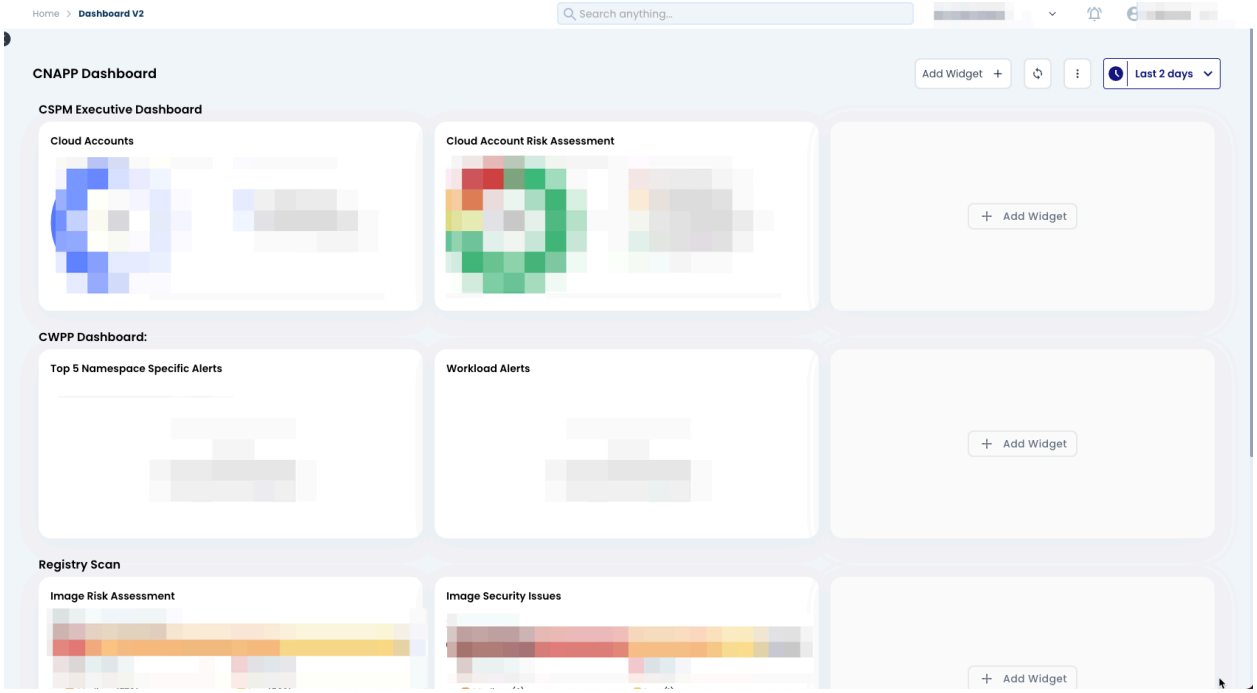
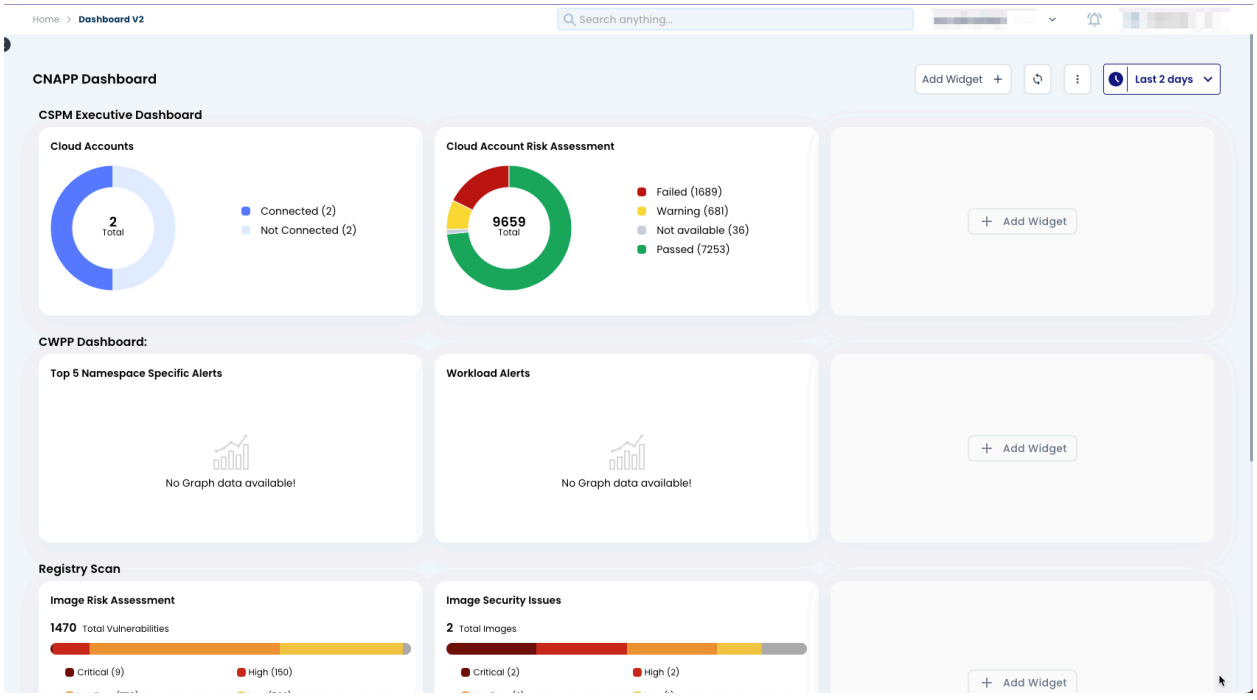
Assignment For Frontend Trainees.

Create a Dashboard Page similar to mentioned Below image



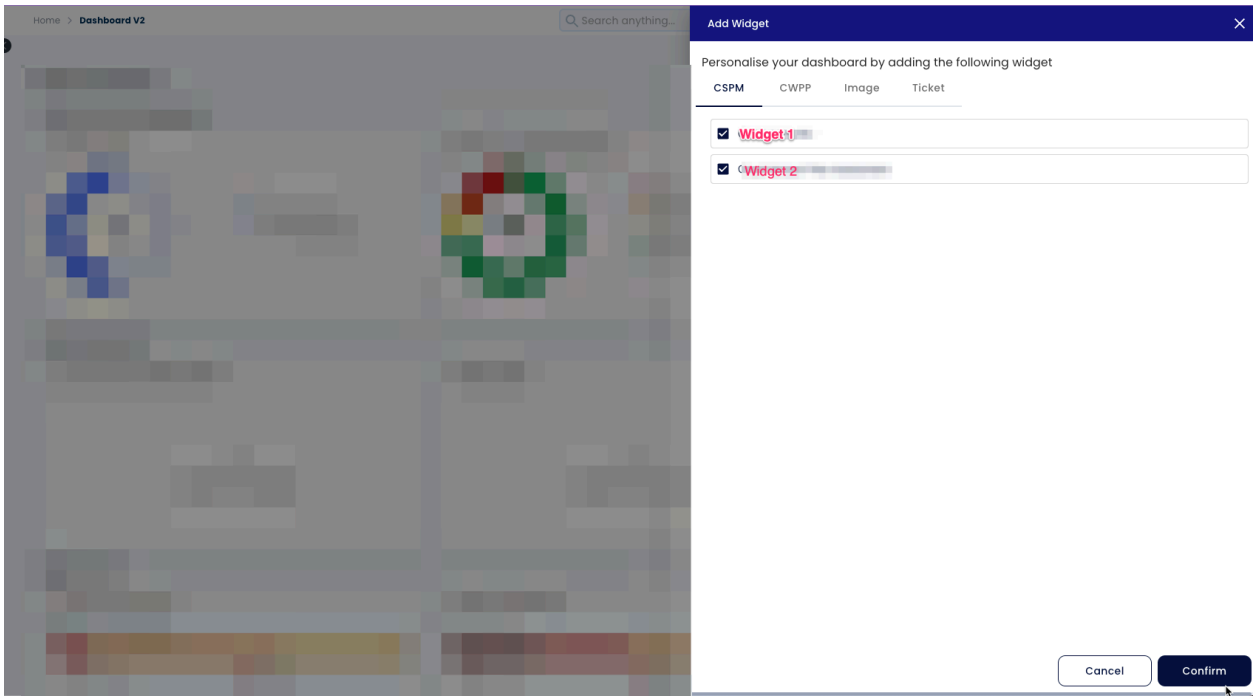


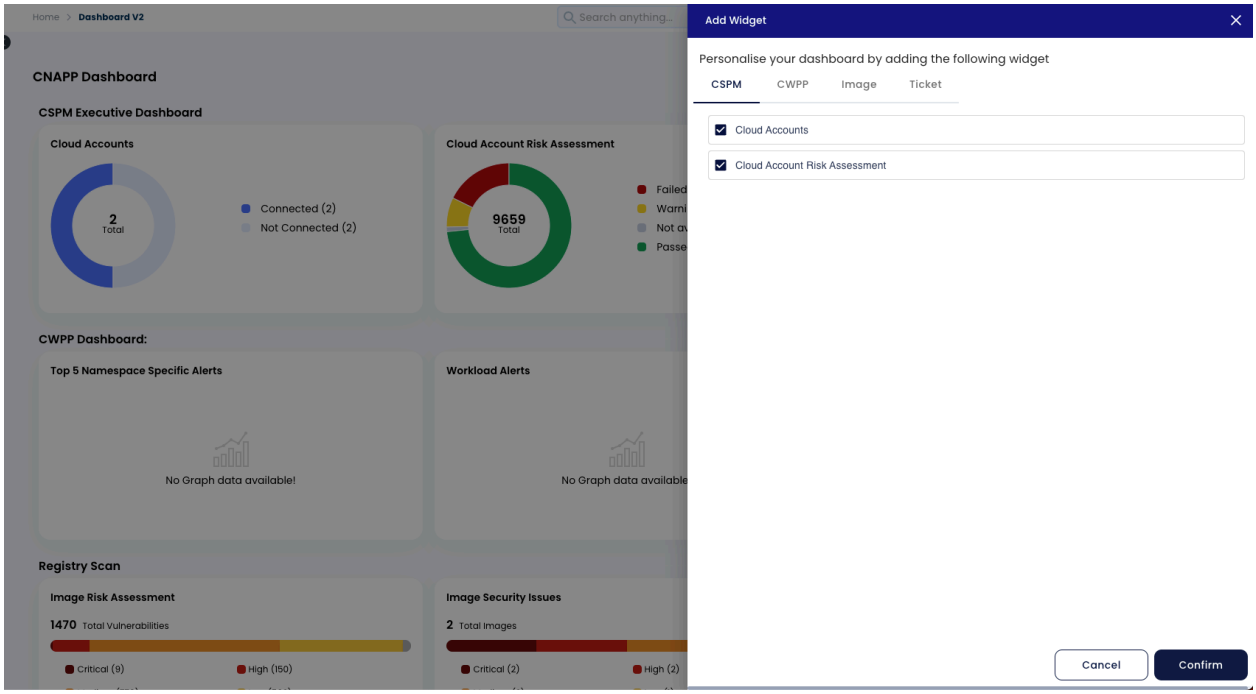
1.Create a Json to build this dashboard / widget dynamically. Json should contain categories and each category can contain multiple widgets.

2. Users should be able to dynamically add a widget and remove a widget from a section/ category. eg : CSPM Executive dashboard is a category.

3. For individual widget, for assignment purposes we can just put random text.

4. Once the user clicks on +Add Widget, users should be able to add Widget name, widget text , and it should be added to that category.





5. On each widget, we can have a cross icon to remove it from a category or users can go to add category section and uncheck from category list

6. Users should be able to search in a list of all the widgets.

Development:

1. Please use any technology to build this page, React / Angular
2. Please use any store management tool to add widget and remove widget locally
3. Please share code via github link / share via zip file.
4. Please mention all the steps to locally run the application.
